COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

COTTON PRODUCTION IN CALIFORNIA, 1928-1937

- By Counties and Valleys -

Acreage planted to cotton in California during the 10 years 1928-1937 has varied from 124,000 acres in 1932 to 624,000 acres in 1937. The 1932 acreage was the smallest since 1923, while the acreage planted to cotton in 1937 was by far the largest of record. The planted acreage shown for 1933 includes about 13,000 acres which were later withdrawn from production under the terms of the cotton program.

Average yield per planted acre during this 10-year period has varied from 369 pounds lint in 1928 to 571 pounds lint in 1936, which is the highest seasonal average yield produced in California.

Production of cotton is expressed in 500-pound equivalent gross weight bales, and during the period has varied from 129,000 bales in 1932 to 738,000 bales in 1937.

These county data are on the basis of county where grown, adjustments having been made for amounts of seed cotton that were moved from one county to another or across State boundary lines for ginning.

The estimates of acreage planted are based upon Federal Census of Agriculture reports of 1925, 1930, and 1935, available data from the Agricultural Adjustment Administration for the years 1933 to 1937, and current reports from crop reporters, along with information obtained from various cotton production finance groups within the State.

All of this cotton has been produced by irrigation. The major part of the acreage has been grown on a one-variety area basis and planted with well bred seed mainly of the Acala variety.

Geo. A. Scott,
Senior Agricultural Statistician.

Prepared by:
R. E. Blair,
Senior Agricultural Statistician.
